

Diana S Nascimento is an investigator at Instituto de Investigação e Inovação em Saúde (i3S) and an assistant researcher and professor at Instituto de Ciências Biomédicas de Abel Salazar (ICBAS), University of Porto. The main goal of DS Nascimento research is the development of more efficient bioengineered therapies for cardiovascular disorders, with special emphasis on driving cardiac regeneration and/or inhibiting the formation of fibrosis. In the past years, her lab has done significant contributions, namely on: 1) therapies to improve heart repair; 2) advancing the knowledge on cardiac regeneration and cardiogenesis; 3) extracellular matrix aging and remodelling after injury; 4) new approaches to analyse the cardiac injury response.
