

Hideaki Inazumi is a physician-scientist specializing in heart failure. Since April 2023, he has been working as a postdoctoral researcher at the University of Tokyo, where his research focuses on elucidating the pathophysiology of heart failure and developing novel therapeutic strategies.

After completing his cardiology fellowship, Dr. Inazumi earned a Ph.D. from Kyoto University, where he investigated the role of a transcriptional regulator in cardiomyocytes. His current research interests center on the sex differences in cardiovascular disease and the underlying mechanisms that drive these disparities.
