

Dr Jeff Erickson is an Associate Professor in the Department of Physiology at the University of Otago, New Zealand, as well as a member of HeartOtago. He received his PhD in 2006 from Florida State University and subsequently held postdoctoral positions at the University of Iowa and the University of California, Davis. His research focuses on the regulatory pathways that underpin heart failure progression and arrhythmogenesis in the diabetic heart. His findings have been highlighted in journals including Nature, Cell, PNAS, Science Signalling, and Circulation Research. Dr Erickson is currently the Secretary for the Leadership Council of the Australasian Section of the International Society for Heart Research.
