

Kendrick Yiu is a DPhil student in Medical Sciences at the University of Oxford, specialising in cardiovascular medicine and translational research. He is based in the Radcliffe Department of Medicine under the supervision of Associate Professor Svetlana Reilly. He previously earned a Master's degree in Clinical Research from Imperial College London, conducting his research at the National Heart and Lung Institute. Kendrick's DPhil work focuses on deciphering the molecular mechanisms underlying fibrosis and structural remodelling in atrial fibrillation, with the aim of advancing therapeutic strategies. Alongside his primary research, he contributes to multidisciplinary collaborations involving clinical biomarkers, multiomics, and miRNA studies.
